## Evening Brief

Date: Wednesday July 11, 2018

---

### Weather Summary

**High Risk for lightning** in northern and western NV Friday and over northern NV and ID Saturday...

Monsoonal moisture will be pushed a little further south Thursday with drier conditions across ID/WY/northern NV/northern UT and continued wetter storms further south. A mix of wet/dry storms will still occur Thursday on the northern fringe of the moisture.

On Friday, moisture will push northward into western/northwest NV, resulting in thunderstorms in areas that have not yet seen much lightning. However, these storms may start developing later in the evening on Friday over western/northwest NV. A **High Risk** has been issued for Friday for NW and western NV for mixed wet/dry thunderstorms and gusty outflow winds. Storms will initially be dry and may transition to a mix of wet/dry. The northern moisture push will continue into Saturday, with storms expected across northern NV and Southern ID, and **High Risk** has been expanded north on Saturday.

---

### Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	3	Moderate Initial Attack Activity
National	3	New Fires and Acres: 37 fires for 734.5 acres; 4,431 acres large fire growth

---

Great Basin Fuel Status [interactive link](#) (Use Edge, Chrome or Firefox browsers)

**Fuels and Fire Behavior advisories have been issued for [Nevada](#) and [Utah](#)**

### Fire Potential

Sagebrush live fuel moisture values are still below normal across Northern UT, and near record lows for a small area of far west ID. Elsewhere across the GA the sagebrush live fuel moisture values are closer to normal or above for early July, but have peaked and are on the downward trend.

Fire danger values continue to drop over southern NV, the AZ Strip and southern UT, with some areas below the 50th - 70th percentile. Over UT, ERCs have dropped to the 80th - 90th percentile. Continued higher RHs and scattered wetting rains over the S and E portions of UT/NV and the AZ Strip will minimize any ignitions from growing rapidly.

ERCs are on the rise over W and N NV into ID as dry weather continues, with current ERCs in the 50th - 80th percentile. The significant carryover fuels from 2017 and additional critically dry fine fuel crops from the spring in W and N NV into parts of southern ID/western UT are still significantly contributing to fire spread. Sagebrush fuel moisture continues to decrease in these areas with fuel moisture across portions of western/northern NV now below critical levels and contributing to fire spread.

### Resources:

#### Aviation within the Great Basin

- 24 SEATs
- 12 Type 1 Helicopters / 7 Committed
- 13 Type 2 Helicopters / 10 Committed
- 18 Type 3 Helicopters
- 4 CL-415 / 4 LATs/ 2 VLATs (Mechanical O/S)

#### Crews Committed within the Great Basin

- 20 IHCs Committed / 1 available
- 37 T2IAs Committed / 7 Available

## Current Incident Details

**\*\*fires occurred previous night, not previously reported**

### Todays Activity (from WFDSS):
